DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Adams. Adams discloses in Figure 2 and in column 4, line 7 to column 9, line 6 a teaching aid comprising a soft model of a human breast 40, an imitation lump 62 mounted inside the breast and a sensor 59 attached to the lump. The sensor detects pressure, and transmits related data to a computer. While the sensor of Adams is not technically a "switch", it is considered analogous to a switch in that both serve the purpose of detecting and indicating pressure applied by the user. Providing a switch would have been an obvious variation on the sensor of Adams as a means of indicating proper pressure levels to be applied.

Allowable Subject Matter

Claims 2-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9-14 are allowed.

Application/Control Number: 10/696,604

Art Unit: 3712

The following is a statement of reasons for the indication of allowable subject matter: The prior art fails todisclose all of the limitations of the claims. In particular, there is no disclosure or suggestion of an insert which is mountable in the breast model at a desired orientation. This feature enables the user to easily change the location of the imitation lump within the breast model, to allow for more variation and more of a challenge to a user trying to locate the lump. While breast models having simulated lumps are known, as disclosed for example by references such as Adams, Fasse and Goldstein, there is no motivation or suggestion to provide a mountable insert as recited in claims 2, 9 and 14. As a result those claims, and all calims dependent therefrom, contain allowable subject matter.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fasse, Goldstein, Jacobson and Leight disclose breast models for use in training a user to detect lumps in a breast.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kurt Fernstrom whose telephone number is (703) 305-0303. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Derris Banks can be reached on (703) 308-1745. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
